EXPERIENCE

Salesforce

February 2026 - Present

San Francisco, CA

Member of Technical Staff

- Built a centralized IP Blocking service using an **agentic AI development pipeline** with persistent project context ("second brain"), specialized agents for implementation, testing, and code review, and a **test-driven development** workflow with cross-agent PR reviews.
- Built a scalable **event-driven** system using **SNS, SQS, DynamoDB, and S3** to ingest and persist **SBOM** and security metadata, allowing distribution across downstream services.
- Engineered an **AI security agent** that continuously monitored AWS infrastructure, **detected security-group** drift and misconfigurations, and executed automated corrective actions, reducing on-call resolution time to **under 5 minutes**.

Software Engineering Intern

May 2025 – August 2025

- **Patent Pending:** Developed a **browser AI agent** that automated Agentforce agent provisioning and configuration through workflow orchestration, predictive path planning, and conversational interfaces.
- Designed a **multi-agent** system to dynamically optimize the DDoS mitigation algorithms for cloud services, improving platform resiliency and performance using **MCP Server, AWS, Splunk, and Python**.

MasterCard

June 2023 – August 2024

Pune

Software Engineer - 1, Payment authentication team

- Launched Payment Passkey authentication service, enabling secure biometric payments for **1M+** shoppers (View Here).
- Implemented microservices using **Java** and **Spring Boot**, optimized database operations with **SQL** on **OracleDB**, and streamlined deployments by integrating **CI/CD** pipelines in **Jenkins**.
- Designed sequence diagrams and DB-schemas for 3DS authentication, and built a simulator to mock dependencies.

Software Engineer - 1, Checkout team

- Delivered the merchant validation service, performing checks on 30+ PII parameters with stakeholder bank approvals.
- Reduced the test suite execution time of **REST APIs** to 1/4 th, by migrating from Serenity to Karate framework.

Azodha

March 2022 – June 2023

Pune

Software Engineering Intern

- Built a Telemedicine software using **Node.js** with video-conferencing ability and integrated a **Socket.io** chat system.
- Implemented a scheduler service in **JavaScript** and **GraphQL** with appointment and user management features.
- Launched a v3 Chrome Extension using **React.js** and a web app acting as the replica of the mobile software.

PROJECTS

Drone Landing Zone Detection using Semantic Segmentation

April 2025

- Designed and implemented a hybrid supervised-unsupervised pipeline (SegFormer, MaskFormer, OneFormer + DBSCAN) to identify safe drone landing zones from aerial images, achieving **~93% mean accuracy**.
- Fine-tuned transformer-based segmentation models on the Semantic Drone Dataset (400+ annotated images) with data augmentation and hyperparameter optimization to improve IoU and Dice scores.

EDUCATION

Georgia Institute of Technology

August 2024 – December 2025

Master of Science in Computer Science, **GPA: 4/4**

Atlanta, USA

- Relevant Coursework: Data Structures & Algorithms, Network Security, Computer Vision, Machine Learning

University of Pune - Pune Institute of Computer Technology

August 2019 – May 2023

Bachelor of Engineering in Computer Engineering, **CGPA: 9.69/10**

Pune

- Relevant Coursework: Operating Systems, Computer Networks, Object-Oriented Design, Database Systems

SKILLS

Languages: C++ , Java, JavaScript, Typescript, Go, Python
Backend: Spring Boot, Node.js, Express.js
Databases: MongoDB, MySQL, DataCloud, Firebase

Frontend: React.js, Redux, HTML, CSS
Platforms and Tools: AWS, Git, Linux
Experience with: Docker, GraphQL, UNIX, Agile
